

Anshika Gupta

Email: anshikagupta379@gmail.com | [LinkedIn](#) | [Portfolio](#) | [Github](#) | Mobile: +91 8824623961

SKILLS

Languages: Python, Java, C++, SQL, HTML, CSS, JavaScript
Libraries & Frameworks: TensorFlow, Keras, PyTorch, Hugging Face, Scikit-Learn, Pandas, Numpy, Matplotlib, PySpark, Selenium, NLTK, Flask, Django, FastAPI, Streamlit, Apache Hadoop, Spark, Node.js, React
Tools: PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, Snowflake, Amazon QuickSight, Tableau, Power BI, Google Analytics, AWS (S3, SageMaker, Redshift, Lambda), Microsoft Azure, Google Cloud Platform, Informatica, KNIME, Docker, Git

EXPERIENCE

- Data Scientist**
JSimple Technosoft
Aug 3, 2024 – Present
Noida, Uttar Pradesh
- Built AI-driven dashboards in [Amazon QuickSight](#) on [AWS EC2](#), delivering predictive attrition insights. Automated [data cadence](#) via [SFTP](#) for real-time analysis, which reduced manual reporting and accelerated [decision-making](#) for stakeholders.
 - Utilized [PostgreSQL](#) to join and preprocess datasets for real-time dashboards and automated data updates via [SFTP](#).
 - Fine-tuned [LLaMA 3.2](#) to develop [HR chatbot](#) for employee support, improving accuracy of policy query resolution by [35%](#).
 - Implemented cost-effective, open-source [LLM](#) frameworks, cutting operational costs by 20% while improving scalability.
 - Leveraged AWS services to deploy and manage [LLaMA-based HR chatbot](#), ensuring secure and efficient operations.
- Data Analyst Intern**
Mazars India
Feb 20, 2023 – Apr 20, 2023
Gurgaon, Haryana
- Analyzed financial data from [ERP/CRM](#) systems using [SQL](#), ensuring accurate, timely audit reports.
 - Automated data cleaning and developed custom [KPIs](#) with Excel [Macros](#) and [DAX](#) in [Power BI](#), boosting efficiency by [30%](#).
 - Led an intern team to create an [ML](#) model for anomaly detection, speeding up audits & optimized performance with C++ modules to enhance processing speed and memory by [15%](#).
- Machine Learning Researcher**
UpSkillz
July 1, 2022 – Sep 1, 2022
Gurgaon, Haryana
- Conducted [EDA](#) on imbalanced datasets (e.g., transactional data), improving [model recall](#) from 0.82 to 0.91.
 - Optimized Kaggle Tumor classification models (AlexNet, GoogleNet, ResNet, VGG16) through [Transfer Learning](#), tuning, and layer modifications to boost accuracy. Presented an in-depth review.

EDUCATION

B. Tech in Computer Science (Specialization: Data Science), CGPA: 8.75
The NorthCap University
Oct 2020 – June 2024
Gurgaon, Haryana

PROJECTS

- Crop Disease Prediction using Deep Learning:** Developed a [CNN model](#) for crop disease prediction ([97% accuracy](#)), recommending treatments for 14 plants and 26 diseases using [TensorFlow](#) and [Keras](#). Deployed with [FastAPI](#) and integrated with front-end (HTML/CSS/JS), tested against popular architectures.
- Customer Segmentation and Recommendation System:** Analyzed a transactional database (541,908 entries) using [EDA](#) and [PCA](#), built a recommendation system with collaborative/content-based filtering, and used [K-means clustering \(RFM\)](#) to analyze customer behavior, validated with [silhouette scores](#), [elbow method](#) and [radar charts](#).
- Health Insurance Claim Analysis:** Built a predictive regression model for health insurance claims, tested age group differences via [ANOVA](#), trends with [pyplot](#), and evaluated models ([Linear Regression](#), [Decision Tree](#), [LightGBM](#), [XGBoost](#)) using [MSE](#) and [R2](#) scores.
- Credit Card Fraud Detection Model (99% Accuracy):** Achieved [99% accuracy](#) on a [PCA-transformed](#) dataset (284,807 transactions), corrected class imbalance with [Borderline SMOTE](#), and compared mean amounts using [t-test](#). Applied [Logistic Regression](#), [Naïve Bayes](#), [KNN](#), and [Random Forest](#), evaluated with [Accuracy](#), [Precision](#), [Recall](#), [F1](#), [AUC](#), and [z-test](#).
- Power BI Analysis of IPL Performance and Trends:** Descriptive analysis of IPL data of the decade, included [DAX](#) for custom calculations, filters, slicers and pivots creating charts, insights, dashboard and plots. Provided prescriptive insights.
- Flight Delay Analysis and Visualization using Tableau:** Analyzed factors contributing to flight delays, cancellations, and diversions across various airports and airlines, created interactive dashboards including charts, trends, and use of [Calculated Fields](#).
